

Comfort Study

Linings...

the inside story

Comfort Study

GAMA brings you scientific evidence that cellulose acetate linings are more comfortable than polyester linings.

What do linings add to the garment?

- *Help them breathe*
- *Keep their shape*
- *Make them feel better when you slip them on*
- *Help them move with you*
- *Protect outer shell fabric*
- *Prevent see-through*
- *Keep you more comfortable*

Comfort Study

Over the next few weeks GAMA will update you on the results of tests comparing cellulose acetate and polyester in garment linings

Why Cellulose Acetate linings?

Cellulose Acetate is a silk-like material, breathable and is a widely used fibre for top quality lining fabrics.

In recent years some garments have also been lined with polyester fibers... but does it perform like acetate?

Maybe polyester “looks” similar to acetate... but does it “feel” the same?

Comfort Study

Acetate v Polyester final results coming soon...

The tests were conducted at the **SENSORY ANALYSIS CENTER, KANSAS STATE UNIVERSITY, United States** by a team of highly qualified experts.

GAMA will bring you the final results of comfort perception testing on acetate versus polyester lining fabrics.

Don't miss it...
